So once we have the formation of our neural tube and our neural crest cells are diving off into the tissues and differentiating, and we have a pretty good idea of what the ectoderm, mesoderm and endoderm are, our early embryogenesis is complete. So just to recap, we started off as a zygote, a single cell that was fertilized by a sperm.

In our article on weeks 1-3 of embryonic development you'll learn that the first stage of development starts off with fertilisation. This is the process of male sperm fusing with the female ovum and it's the basis of the embryology covered in the article. After fertilisation, there is the formation of the inner cell mass and outer cell mass and the zygote eventually becomes a blastocyst which is then ready for implantation.
