effect for factor interaction (test statistic, F ratio, p value, and effect size). The univariate ANOVA results including main effects for each IV and DV (F ratio, p-value, and effect size). The post hoc results and your conclusions.

Univariate Anova Analysis Homework Sample

Download File PDF Effect Sizes For Research Univariate And Multivariate Applications

The estimate of effect size suggests that the investigator expects a difference of 2/3's of a standard deviation. The conversion of this effect size (Cohen's d) to an R^2 equivalent is found by computing $r^2 = d^2 / (d^2 + 4) = .143$. Assuming two groups of equal size at $n_1 = n_2 = 20$, the df_e for the problem is $N - q - 1 = 40 - 1 - 1 = 38$.
