Fundamental Immunology by William E. Paul

Fundamental Immunology, which was 809 pages in its first version, has more than doubled in size and a field that seemed almost too broad to be encompassed in a single volume in 1984 is now far broader.

Fundamental Immunology | William E. Paul | download

Immunology is the study of the ways in which the body defends itself from infectious agents and other foreign substances in its environment. The immune system protect us from pathogens. It has the ability to discriminate (differentiate) between the individual's own cells and harmful invading organisms. Immune system has two lines of defense:
