Engineering Handbook For Hazardous Waste Incineration

Incinerators can be subdivided into grate firing systems, fluidized bed systems (stationary and circulating FB's) and fixed bed systems. In MSW incineration, grate firing are the common systems with a wide distribution and a long-term experience. Typical grate firing systems for refuse incineration are shown in Figure 1: (i). Reciprocating grates,

Municipal Solid Waste Incinerator Design: Basic Principles

An incinerator is a furnace for burning waste. Many paper and pulp mills incorporate them into their pollution mitigation systems. Incineration involves the high-efficiency combustion of certain solid, liquid, or gaseous wastes. The reactions may be self-sustaining based on the combustibility of the waste or require the addition of fuels.

1/95 Solid Waste Disposal 2.2-1 2.2 Sewage Sludge Incineration There are approximately 170 sewage sludge incineration (SSI) plants in operation in the United States. Three main types of incinerators are used: multiple hearth, fluidized bed, and electric infrared. Some sludge is co-fired with municipal solid waste in combustors based on refuse combustion technology (see Section 2.1).
