Marine Reptiles - PLOS

Reptiles have repeatedly invaded marine environments despite their physiological constraints as air breathers. Marine reptiles were especially successful in the Mesozoic as major predators in the sea. There were more than a dozen groups of marine reptiles in the Mesozoic, of which four had more than 30 genera, namely sauropterygians (including plesiosaurs), ichthyopterygians, mosasaurs, and ...

Reptiles. Reptiles are cold-blooded animals with backbones. Some reptiles live in the oceans instead of on land. Sea turtles and sea snakes are two examples of marine reptiles that live in the oceans. These animals have special designs and shapes that make it possible for them to live in the ocean.
