### Oracle General Ledger User's Guide

The example in above Figure illustrates another important FSG concept: Generally, accounts are assigned to row definitions and amount types are assigned to column definitions. In the example, these typical report dimensions produce an expense listing where each report line is an expense account and the two primary columns are the year-to-date actual expenses as of December 1995 and ...

A column set defines the format and content of the columns in an FSG report. In FSG, the commonly assumed attribute for a column definition is a time period (amount type), whereas the attribute for a row definition is an account assignment. Therefore, typical column sets include headings and subheadings, amount types, format masks, currency assignments, and calculation columns for totals.
