Rocks are analogous to the big, important things in our life that give it meaning: family, partner, health, goals and dreams. If you take actual physical rocks and put them in a glass jar, you'll find that there's space left over for smaller objects like pebbles, sand and

Rocks are so common that most of us take them for granted—cursing when we hit them with the garden hoe or taking advantage of them to drive in tent pegs on summer camping trips.

“My earliest memories all involve being drawn deep into nature, where I welcome, rather than fear, getting lost. I welcome the mysteries that lurk at the bottom of the sea and live inside the dark forest of night.” — Joe Perry, *Rocks: My Life in and out of Aerosmith*

Big rocks are the things that truly matter to you in your life. Without getting your big rocks in first, they will never fall into place. You can be busy with random day-to-day activities (which are the gravel, sand, and water in the example) and your big rocks will be left at the wayside, never able to enter your life.

The Big Rocks of Life!  
One day a wise teacher  
was speaking to a  
group of his students.  
He pulled out a one-  
gallon, wide-mouthed  
mason jar and set it on  
a table in front of him.  
Then he produced  
about a dozen fist-  
sized rocks and  
carefully placed them,  
one at a time, into the  
jar.

The rocks in space are sometimes called small bodies. Some of them are larger and are called minor planets or planetoids. They may also be known as NEOs -- Near Earth Objects.

Whatever they may be called, they have much to tell us about our solar system. The three main types of space rocks are comets, asteroids and
